

## **TOOL // Math Observation Log**

### **What is it used for?**

The tool allows the teacher to gather data of students' achievement of the learning goals during an instructional period.

### **How do you use it?**

The teacher records very specific learning goals in the top box related to a particular strand in mathematics. During student learning activities, the teacher places check marks in the appropriate columns: Not Yet, Approaching the Goal, Meeting the Goal, and Extending the Goal. This informs the groupings for future teaching/learning and the specific lesson focus.
