

## **TOOL // Math Assessment Binder Sheets**

### **What is it used for?**

This tool is used to record ongoing assessment data in mathematics for primary students.

### **How do you use?**

For each teaching/learning unit students complete an assessment task. The class results are recorded on the recording sheet by strand and kept in a binder divided into strands. The results inform and support evaluation. The sheet reflects the individual sheet that is completed on each student as they do the assessment task. (*Check Gr. 2 3D Geometry Assessment in the Checkbric section*).

### **How do you adapt it to other subjects and topics?**

Each sheet can easily be adapted to reflect the expectations and the strand that are the students are working on.
