Egg

Tadpole
Lots of detail and descriptive language.

Included greater detail, and action words. Communicated his/her feelings.

Add more detail.
oo oog fogs ar gren and bloo

i lik fogs they ar nis and

frog
Frogs are cool. They eat bugs. They jump. They live in wet places. They are lots of colours.
Oh Frogs!

Frogs are awesome!
Frogs live in wet places. They live in ponds and lakes. They live on land too.
Frogs are lots of different colours and sizes. The smallest frog is as small as your fingernail. Colourful frogs usually mean they are poisonous. Frogs have webbed feet to help them swim in water.
Frogs usually eat insects but some frogs even eat mice or small birds.
I think frogs are amazing!
All About Frogs

What amphibian lives on land and in water? If you guessed a frog you are right!

Where Frogs Live:
Frogs live all over the world except for the Antarctica because it is too cold for them. Brrr! Some frogs live in trees and desserts too. Frogs are interesting because they live on land and in water.

What Frogs Look Like:
Frogs can be lots of different colours but bright colours like yellow and blue usually mean that they are poisonous. Yikes! Frogs have four legs, and webbed feet to help them swim in the water. Some frogs have stripes or spots too. Frogs can be big and small. The smallest frog is about the size of your fingernail. Wow!

What Do Frogs Eat:
Most frogs eat insects but some bigger frogs even eat mice and small birds. Yuck!

Even though frogs are harmless and help people by eating insects, I am still afraid of these slimy, little amphibians.
